Gosha-jinki-gan lessened symptoms after cervical expansive laminoplasty : a case report

Hirobumi Yoshida, et al.*

Abstract: We report a case of a 57-year-old man with symptoms after cervical expansive laminoplasty for ossification of the cervical posterior longitudinal ligament. As Loxoprofen Sodium (Loxonin®) and Mecobalamin (Methycobal®) were unsuccessful in relieving his symptoms, TSUMURA Gosha-jinki-gan Extract Granules for Ethical Use (TL-107) was administered. After two weeks of medication, his symptoms were observed to disappear.

Key words: cervical expansive laminoplasty, postoperative symptoms, Gosha-jinki-gan
