## MRSA 術後感染治療に対する 補中益気湯 (TJ-41) の使用経験

普天間朝拓\*

**要旨:**年間多くの患者が発生し、手術となることの多い大腿骨近位部骨折の術後感染は、患者、整形外科医にとって重大で悲惨な問題である。これまでの起炎菌のみに焦点をあてた感染治療に加え、宿主の免疫調整力や体力保持に焦点をあてることのできる漢方治療は、術後感染治療に有効で不可欠な治療になると考える。

索引用語：術後感染，補中益気湯 (TJ-41)

### PAIN AND KAMPO MEDICINE Vol.19 (2009)

#### A Case of surgical site infection (post hemi-arthroplasty of hip joint) treated with hochuekkito (TJ-41)

Chotaku Futenma \*

**Abstract:** Postoperative infection is very distress not only surgeons but also patient. Sometimes it is refractory to only conventional treatment: debridement and parenteral antibiotics because of host side problem such as DM patient, high age, steroids user and other immuno-compromised host.

In addition to conventional therapy, using Kampo medicine will provides modulation of immune-system to the patient.

It may very usefull to add Kampo medicine to control postoperative infection.

I will reported the case of patient who received hochuekkito (TJ-41) for postoperative infection.

**Key words:** postoperative infection, hochuekkito
